

# **OPTOMAP RETINAL IMAGING**

---

**Optomap Retinal Imaging**: digital exam of the retina  
without the use of eye drops

---

## **Early detection is crucial!**

We are concerned about retinal problems including cancer, macular degeneration, glaucoma, retinal holes or detachments, and systemic diseases such as diabetes, stroke, and high blood pressure. These conditions can lead to serious health problems, including partial loss of vision or blindness and often develop without warning and progress with no symptoms. Optomap Retinal Imaging can help detect these problems in their early stages.

### **Optomap Retinal Imaging:**

An eye wellness scan  
An in-depth view of the retinal layers (where diseases can start)  
An annual, permanent record of your medical file  
Ability to show you your images today during your exam

### **Dilation:**

Good retinal view  
Blurred vision 2-6 hours  
Light sensitivity 2-6 hours  
No permanent record

Insurance **does not** cover any advanced screening technology beyond the comprehensive exam. However, **Dr. Buck highly recommends Optomap Retinal Imaging** for all patients. This will be done as an enhancement to the comprehensive eye exam for a fee of \$29. For most patients, the Optomap can be used **in lieu** of a dilated eye examination.

I would like Optomap Retinal Imaging. (\$29)

Dilation. (\$25)
